SUMMARY

AI-focused developer with hands-on experience building real-time AI systems, LLM-powered applications, and scalable ML backends. Skilled in designing low-latency AI pipelines, integrating LLMs into production workflows, and developing full-stack solutions using Python, Django, and modern frontend technologies.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript

AI / LLMs: Prompt Engineering, RAG, Vector DB, Embeddings, Agentic AI, GPT Integration, Ollama, HuggingFace Transformers, NLP, MCP Development, Langchain, CrewAI, Google ADK

ML: Scikit-learn, XGBoost, Feature Engineering, Predictive Modelling, PyTorch

Backend: Django, FastAPI, REST APIs, OOPs, Agile, SDLC

DevOps & Tools: Git, GitHub, Version Control, Pinecone, Docker, n8n, Cursor, Replit, Claude Code

EXPERIENCE

AI Product Developer Intern

2026 – Present

Rooman Technologies Pvt. Ltd.

Bangalore, India

- **Voice Agent:** Stabilized a real-time multi-persona voice agent using streaming STT → LLM → TTS pipelines enabling seamless persona switching without session resets.
- Resolved complex async and streaming failures including routing errors, STT reconnection loops, and interruption deadlocks; benchmarked open-source TTS models for latency and deployment constraints.
- **CRM Modules:** Engineered the Accounts module with full CRUD, six view modes (List, Kanban, Grid, Chart, Timeline, Split), 18+ filterable fields, and a deduplication engine for group-based merge resolution.
- Built the Meetings module with Google Meet auto-provisioning, RSVP tracking, and real-time reminder polling; developed the Tasks module with overdue detection, recurring config, and five-status lifecycle management.
- Implemented cross-module Bulk Actions (mass delete, transfer, update) and designed RESTful Django proxy APIs with CSV import/export, soft-delete/restore flows, and timeline audit logging.
- **ERP Modules:** Built RBAC-secured modules with normalized schemas, dynamic dashboards, debounced search, and reusable React UI components using Git-tracked version control workflows.

PROJECTS

GhostFolio — AI Startup Revival Platform | *React, Gemini API* | GhostFolio

- SaaS platform analyzing failed startups and generating AI-powered revival strategies; integrated Gemini API for pivot ideas, viability ratings, and rebranding suggestions using real startup datasets.

errbuddy | *Node.js, CLI, npm* | npmjs.com/package/errbuddy

- Published an npm CLI tool intercepting terminal stderr in real time, classifying errors across 11 runtimes (Node.js, Python, Go, Rust, Docker, Prisma, etc.) via a two-tier hybrid detector and replacing raw stack traces with actionable fix panels via a classify → explain → suggest pipeline.

NPM Hawk | *React, Node.js, Express, OSV.dev API* | npm-hawk.vercel.app

- Full-stack npm monitoring dashboard with auto-discovery of packages by username, real-time CVE scanning via OSV.dev, composite health scoring (0–100) across 5 dimensions, and a multi-package comparison matrix; deployed on Vercel + Railway.

AI-Based Crime Pattern Prediction | *XGBoost, FastAPI*

- ML system predicting crime patterns on Bengaluru datasets with **87% accuracy**; built FastAPI inference pipeline for real-time prediction APIs.

EDUCATION

Sri Sairam College of Engineering

Bangalore, India

B.E. Information Science & Engineering

Expected 2026 | CGPA: 8.3/10

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900) | Infosys Generative AI Certification

Anthropic: Claude 101, Claude Code in Action, Build With Claude API, Introduction to MCP
